

VENKATESH PINNINTI

STAFF ENGINEER

+91 95505 27674

pvenkatesh483@gmail.com

Staff Engineer with ~6 years of experience architecting scalable web applications and distributed systems across frontend and backend. Experienced in building production-grade applications using React, Next.js, TypeScript, Node.js, and PostgreSQL, with strong expertise in system design, performance optimization, and high-scale engineering. Known as a go-to engineer for solving complex technical challenges, driving architectural decisions, and delivering business-critical systems with high reliability.

EXPERIENCE

IMAGINE LEARNING

Staff Engineer | August 2026 - Present

- Staff-level ownership of backend platform work: architecture, scalability and reliability for education products used in classrooms at scale.

GOKWIK ECOMMERCE SOLUTIONS

SDE - II | December 2023 - August 2026

SDE - I | April 2022 - November 2023

Kwik Checkout

- Contributed to GoKwik's growth from **1→100** by designing and implementing high-performance checkout services that process **100k+ RPM** on average while maintaining strict SLAs on latency, availability, and consistency.
- Decoupled monolithic customer/address components into a dedicated microservice, improving fault isolation and performance while executing a **zero-downtime migration**.
- Built a real-time failure-monitoring microservice (EKS, Kafka, MongoDB) that **detects anomalies ahead of user impact**, triggers automated feature downgrades for non-critical paths, and enables **intelligent fallbacks** to protect both merchant conversions and GoKwik's revenue.
- Initiated and **shaped new product features** by translating business gaps into technical proposals, aligning requirements with PMs and merchants, and delivering robust, **production-ready implementations**.
- Drove engineering quality through rigorous code reviews, **architectural evaluations**, and planning sessions across the team.
- Took **end-to-end ownership** of several mission-critical services, implementing performance optimizations and reducing operational overhead.

NEWGEN SOFTWARE TECHNOLOGIES

Software Engineer Trainee → Software Engineer | Jan 2020 - April 2022

- Supplier Portal: Built full-stack enterprise applications using React.js and Node.js for supplier and procurement workflows, enabling real-time invoice processing and vendor management.
- Invoice Processing: Developed data-processing modules in Java and JavaScript to normalize, merge, and enrich document data from multiple OCR engines, improving accuracy, consistency, and fault tolerance.

SKILLS

Programming : JavaScript, TypeScript, Go, Java, HTML5, CSS3

Web/Frameworks: Node JS, Nest JS, React JS, Redux, jQuery, Rest API, JSON, Webpack, SASS, Material UI

Databases: MSSQL, PostgreSQL, MongoDB

Distributed Systems & Cloud Platforms, Tools: AWS ECS, EKS, Lambda, Step Functions, Athena, S3, RDS, Kafka, Redis, Docker, Claude Code, Cursor.

EDUCATION

B.Tech(Information Technology) from R.M.D Engineering college affiliated to **Anna University** in 2020. Secured 7.8 CGPA.

AWARDS

Gokwik's **Special 26 Award** — Recognized among the **top 26 contributors company-wide** for delivering high-impact, system-level innovations that created **outstanding business outcomes**.

Newgen's **Rising Star Award** — Honored for exceptional early impact and rapidly demonstrating strong performance as a new joiner.
